Question 25

- 25 In the diagram below, right triangle PQR is transformed by a sequence of rigid motions that maps it onto right triangle NML .

Write a set of three congruency statements that would show ASA congruency for these triangles.

$$\angle Q \cong \angle M$$

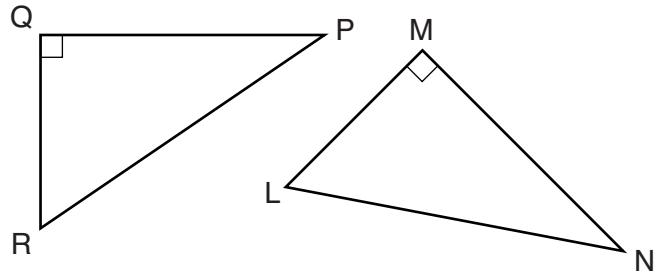

$$\angle P \cong \angle N$$

$$\overline{QP} \cong \overline{MN}$$

Score 2: The student gave a complete and correct response.

Question 25

- 25 In the diagram below, right triangle PQR is transformed by a sequence of rigid motions that maps it onto right triangle NML .

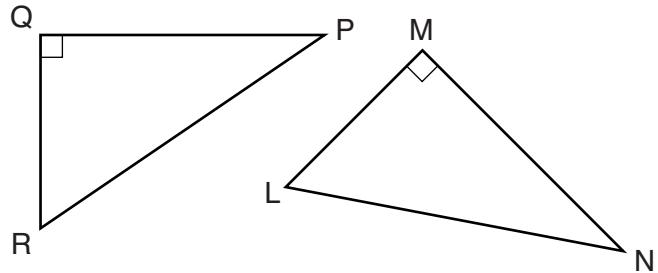

Write a set of three congruency statements that would show ASA congruency for these triangles.

$$\begin{aligned} \angle Q &\cong \angle M \\ \overline{QR} &\cong \overline{ML} \\ \angle R &\cong \angle L \end{aligned}$$

Score 2: The student gave a complete and correct response.

Question 25

- 25 In the diagram below, right triangle PQR is transformed by a sequence of rigid motions that maps it onto right triangle NML .

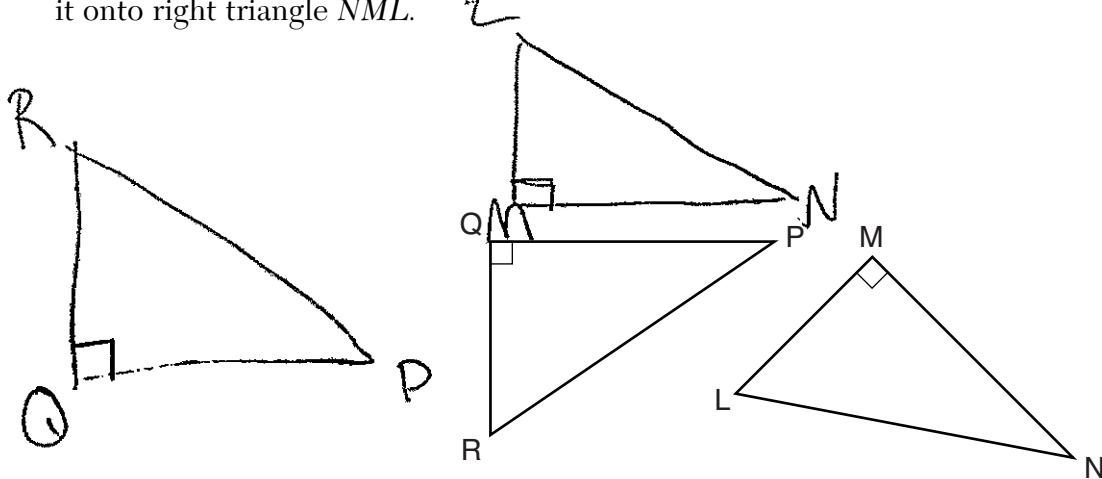

Write a set of three congruency statements that would show ASA congruency for these triangles.

- ① $\angle Q \cong \angle M$
② $\overline{PR} \cong \overline{NL}$
③ $\angle P \cong \angle N$

Score 1: The student wrote congruency statements for AAS.

Question 25

- 25 In the diagram below, right triangle PQR is transformed by a sequence of rigid motions that maps it onto right triangle NML .

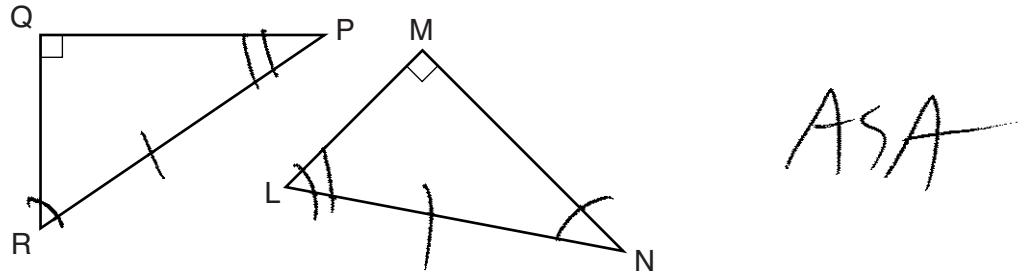

Write a set of three congruency statements that would show ASA congruency for these triangles.

- ① $\angle Q \cong \angle M$ because they are both right angles and all right angles are congruent (Angle)
- ② Since $\triangle PQR$ is formed by a rigid motion of $\triangle NML$ and rigid motions preserve shape and size then $\overline{QP} \cong \overline{MN}$, $\overline{QR} \cong \overline{ML}$, $\overline{RP} \cong \overline{LN}$, $\angle R \cong \angle L$, $\angle P \cong \angle N$
- ③ By ASA $\triangle PQR \cong \triangle NML$

Score 1: The student wrote all corresponding congruency statements, but did not specify which congruencies were for ASA.

Question 25

- 25 In the diagram below, right triangle PQR is transformed by a sequence of rigid motions that maps it onto right triangle NML .

Write a set of three congruency statements that would show ASA congruency for these triangles.

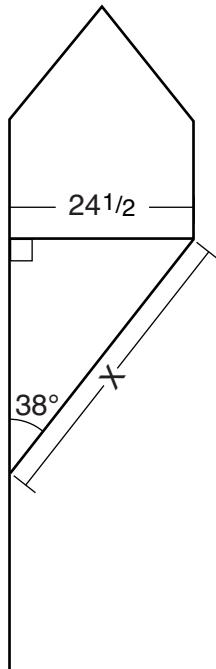

$$\begin{aligned} \cancel{\angle R} &\cong \cancel{\angle N} \\ \cancel{\angle L} &\cong \cancel{\angle P} \\ \hline \overline{RP} &\cong \overline{LN} \end{aligned}$$

Score 0: The student stated only one correct corresponding congruency statement, $\overline{RP} \cong \overline{LN}$.

Question 26

- 26 Diego needs to install a support beam to hold up his new birdhouse, as modeled below. The base of the birdhouse is $24\frac{1}{2}$ inches long. The support beam will form an angle of 38° with the vertical post. Determine and state the approximate length of the support beam, x , to the nearest inch.

(S)H - CAH - TOA

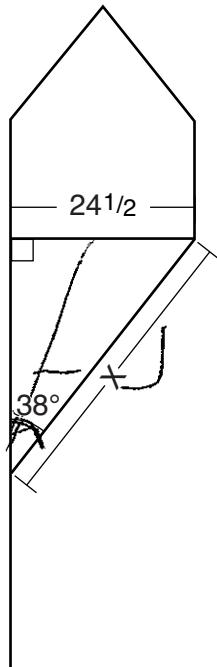

$$\sin 38^\circ = \frac{24\frac{1}{2}}{x}$$
$$x = 39.79459651$$

Score 4: The student gave a complete and correct response.

Question 32

32 Quadrilateral NATS has coordinates $N(-4, -3)$, $A(1, 2)$, $T(8, 1)$, and $S(3, -4)$.

Prove quadrilateral NATS is a rhombus.

[The use of the set of axes below is optional.]

$$AN = \sqrt{(-1 - -4)^2 + (2 - -3)^2} = \sqrt{25+25} = \sqrt{50}$$

$$AT = \sqrt{(8 - 1)^2 + (1 - 2)^2} = \sqrt{49 + 1} = \sqrt{50}$$

$$SN = \sqrt{(3 - -4)^2 + (-4 - -3)^2} = \sqrt{49 + 1} = \sqrt{50}$$

$$TS = \sqrt{(8 - 3)^2 + (1 - -4)^2} = \sqrt{25+25} = \sqrt{50}$$

Score 3: The student did not write a concluding statement.

Question 32

32 Quadrilateral NATS has coordinates $N(-4, -3)$, $A(1, 2)$, $T(8, 1)$, and $S(3, -4)$.

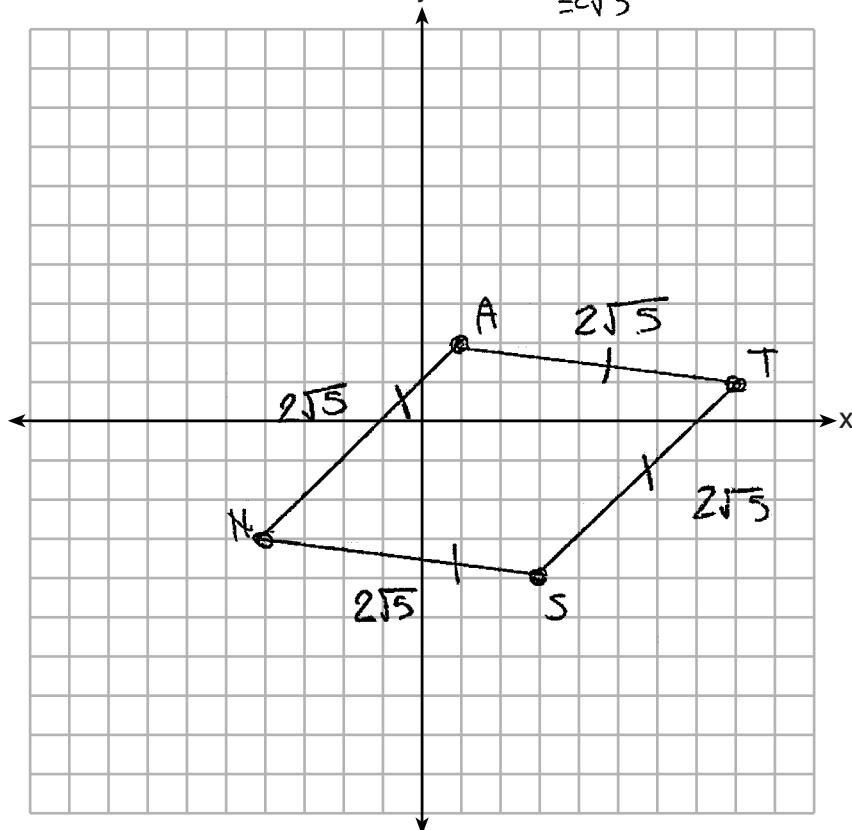

Prove quadrilateral NATS is a rhombus.

[The use of the set of axes below is optional.]

$$\begin{aligned} \overline{NA} &\cong \overline{ST} \\ \overline{AT} &\cong \overline{NS} \\ \overline{NA} &\cong \overline{AT} \end{aligned}$$

$$\begin{aligned} TS &= \sqrt{(-4-1)^2 + (3-8)^2} \\ &= \sqrt{-5^2 + -5^2} \\ &= \sqrt{25+25} \\ &= \sqrt{50} \\ &= 2\sqrt{5} \end{aligned}$$

$$\begin{aligned} AT &= \sqrt{(1-8)^2 + (2-1)^2} \\ &= \sqrt{-7^2 + 1^2} \\ &= \sqrt{49+1} \\ &= \sqrt{50} \\ &= 2\sqrt{5} \end{aligned} \quad \begin{aligned} NS &= \sqrt{(-4+3)^2 + (3+4)^2} \\ &= \sqrt{1^2 + 7^2} \\ &= \sqrt{1+49} \\ &= \sqrt{50} \\ &= 2\sqrt{5} \end{aligned}$$

Score 2: The student made a simplification error and did not write a concluding statement.

Question 32

32 Quadrilateral NATS has coordinates $N(-4, -3)$, $A(1, 2)$, $T(8, 1)$, and $S(3, -4)$.

Prove quadrilateral NATS is a rhombus.

[The use of the set of axes below is optional.]

$$d = \sqrt{(y_2 - y_1)^2 + (x_2 - x_1)^2}$$

$$m = \frac{y_2 - y_1}{x_2 - x_1}$$

$$d_{AS} = \sqrt{(2+4)^2 + (1-3)^2}$$

$$d_{NT} = \sqrt{(1-8)^2 + (8+4)^2}$$

$$M_{AS} = \frac{2+4}{1-3} = \frac{6}{-2} = -3 \quad AS \perp NT$$

$$d = \sqrt{6^2 + (-2)^2}$$

$$d = \sqrt{4^2 + 12^2}$$

$$M_{NT} = \frac{1+3}{8+4} = \frac{4}{12} = \frac{1}{3}$$

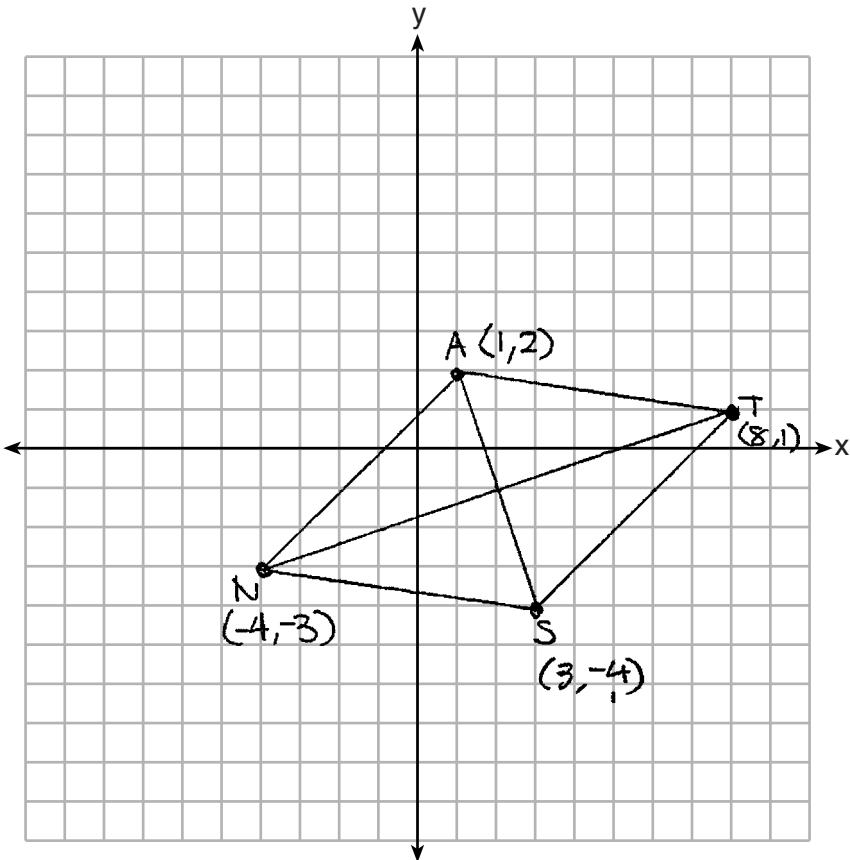

$$d = \sqrt{36+4}$$

$$d = \sqrt{16+144}$$

$$d = \sqrt{40}$$

$$d = \sqrt{160}$$

Quadrilateral NATS is a rhombus because the diagonals are perpendicular to each other

Score 2: The student made a conceptual error by concluding that a quadrilateral with perpendicular diagonals is a rhombus.

Question 32

32 Quadrilateral NATS has coordinates $N(-4, -3)$, $A(1, 2)$, $T(8, 1)$, and $S(3, -4)$.

Prove quadrilateral NATS is a rhombus.

[The use of the set of axes below is optional.]

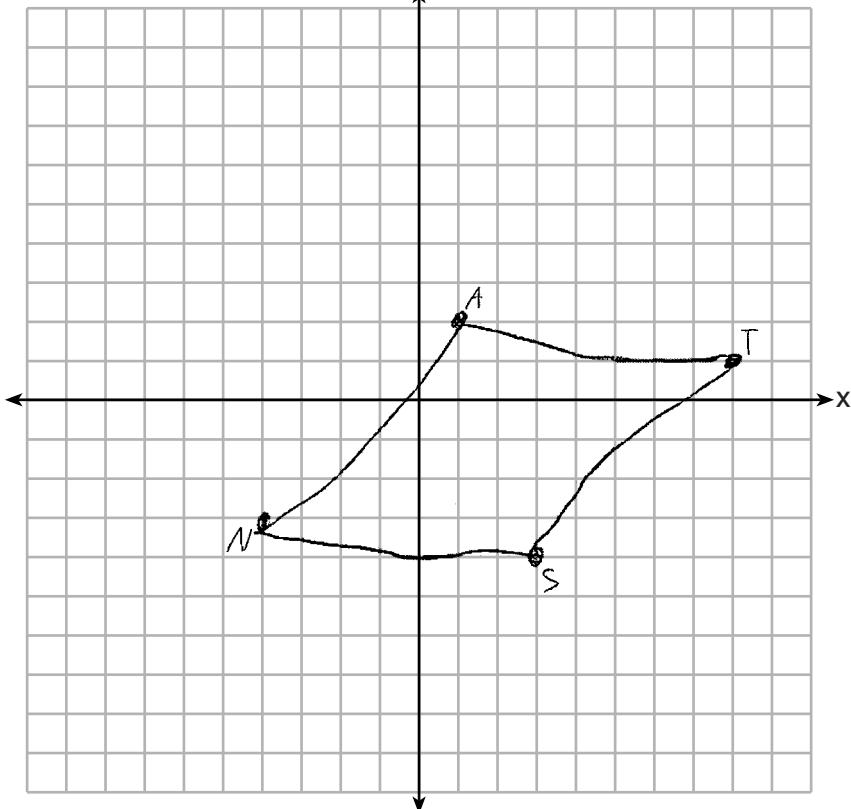

$$\text{Slope } NA = \frac{2 - (-3)}{1 - (-4)} = 1$$
$$\text{Slope } TS = \frac{-4 - 1}{3 - 8} = 1$$

$\Rightarrow \overline{NA} \parallel \overline{TS}$

Yes this is a
rhombus because
both sides are
congruent

$$\text{Distance } NA = \sqrt{(1 - (-4))^2 + (2 - (-3))^2} = \sqrt{50} = 5\sqrt{2}$$

$$\text{Distance } TS = \sqrt{(3 - 8)^2 + (-4 - 1)^2} = \sqrt{50} = 5\sqrt{2}$$

Score 1: The student had correct work to prove NATS is a parallelogram, but the concluding statement was incorrect.

Question 32

32 Quadrilateral NATS has coordinates $N(-4, -3)$, $A(1, 2)$, $T(8, 1)$, and $S(3, -4)$.

Prove quadrilateral NATS is a rhombus.

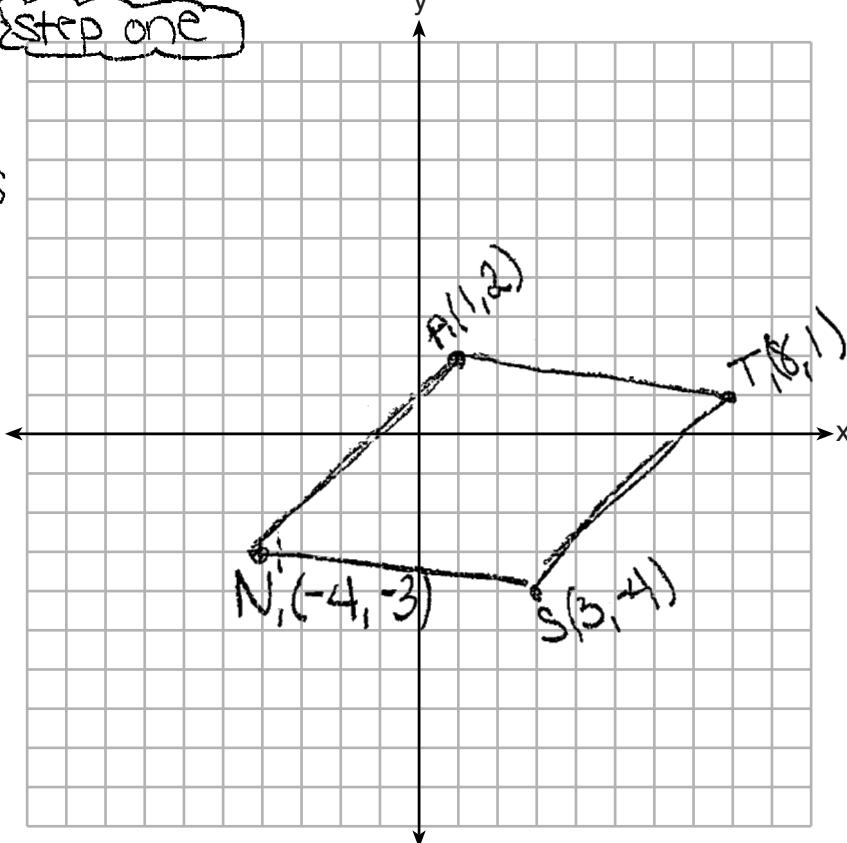

[The use of the set of axes below is optional.]

$$\text{Step 2: } m = \frac{y_2 - y_1}{x_2 - x_1}$$
$$\text{Step 3: } A(1, 2) \quad T(8, 1) \quad m = \frac{1-2}{8-1} = \frac{-1}{7}$$
$$T(8, 1) \quad S(3, -4) \quad m = \frac{-4-1}{3-8} = \frac{-5}{-5} = 1$$
$$S(3, -4) \quad N(-4, 3) \quad m = \frac{3-(-4)}{3-(-4)} = \frac{7}{7} = 1$$
$$N(-4, 3) \quad A(1, 2) \quad m = \frac{2-3}{1-(-4)} = \frac{-1}{5} = -\frac{1}{5}$$

Step one

Step 4:
quad NATS
is not a
rhombus

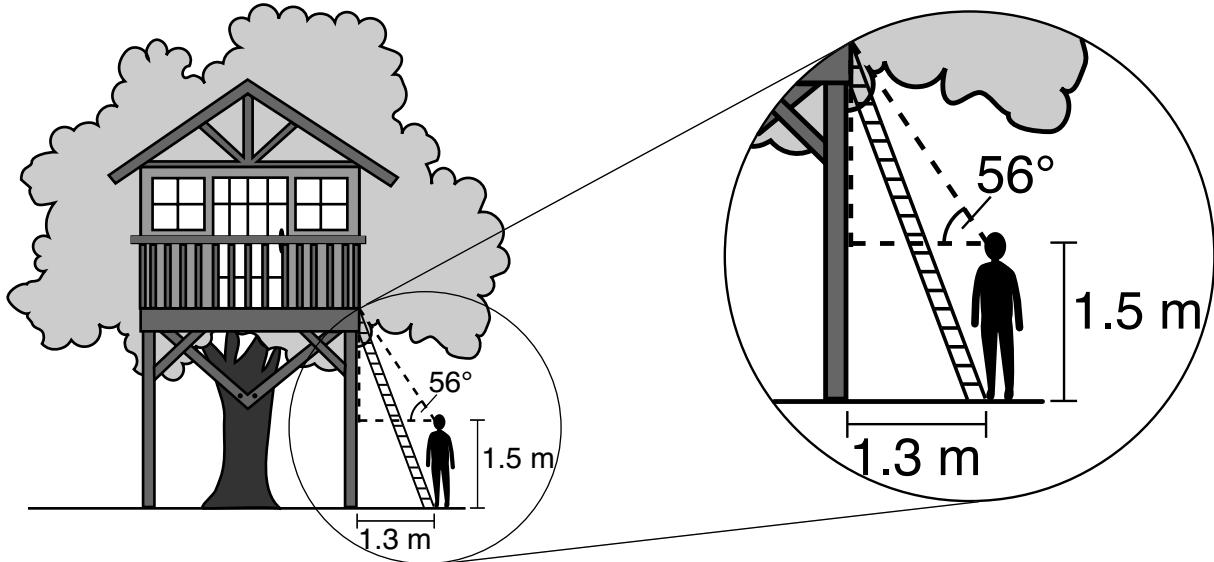

$A \not\cong T$
 $T \not\cong S$
 $S \not\cong N$
 $N \not\cong A$

The new container can be modeled by a rectangular prism with a square base and will contain the same amount of chocolate-covered almonds.

If the new container's height is 16 cm, determine and state, to the nearest tenth of a centimeter, the side length of the new container if both containers contain the same amount of almonds.

$$V = \pi r^2 h$$
$$\pi(7)^2(18)$$
$$2770.88\dots$$
$$\frac{x^2(16)}{16} = \frac{2770.8847}{16}$$
$$x^2 = 173.1802$$
$$x = 13.2$$

The side will be 13.2 centimeter

A store owner who sells the chocolate-covered almonds displays them on a shelf whose dimensions are 80 cm long and 60 cm wide. The shelf can only hold one layer of new containers when each new container sits on its square base. Determine and state the maximum number of new containers the store owner can fit on the shelf.

$$80$$
$$4800$$
$$60$$
$$13.2 \cdot 13.2 =$$
$$174.24$$

square base

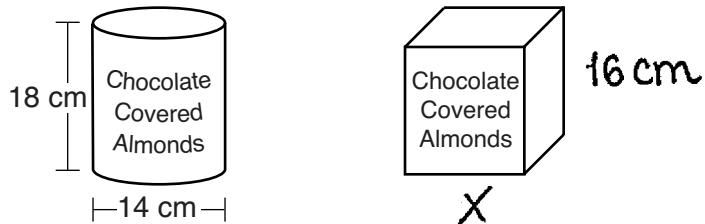

$$4800 \div 174.24 = 27.54$$

127 Containers

Score 3: The student found the side length of 13.2, but no further correct work was shown.

Question 34

34 A manufacturer is designing a new container for their chocolate-covered almonds. Their original container was a cylinder with a height of 18 cm and a diameter of 14 cm. The new container can be modeled by a rectangular prism with a square base and will contain the same amount of chocolate-covered almonds.

If the new container's height is 16 cm, determine and state, to the *nearest tenth of a centimeter*, the side length of the new container if both containers contain the same amount of almonds.

Old Container

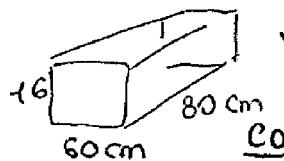

$$\begin{aligned}V &= \pi r^2 h \\V &= \pi 7^2 \cdot 18 \\V &= \pi 49 \cdot 18 \\V &= \pi 882 \\V &= 882\pi \text{ cm}^3\end{aligned}$$

New Container

$$\begin{aligned}882\pi &= \frac{(x^2) 16}{16} \\ \sqrt{x^2} &= \sqrt{173.180295\dots} \\x &\approx 13 \text{ cm}\end{aligned}$$

$x = \text{side length of container}$

A store owner who sells the chocolate-covered almonds displays them on a shelf whose dimensions are 80 cm long and 60 cm wide. The shelf can only hold one layer of new containers when each new container sits on its square base. Determine and state the maximum number of new containers the store owner can fit on the shelf.

$$\begin{aligned}V &= 16 \cdot 60 \cdot 80 \text{ shelf} \\V &= 76,800 \text{ cm}^3 \text{ container}\end{aligned}$$

$$V = 16 \cdot 13 \cdot 13 = 2,704 \text{ cm}^3$$

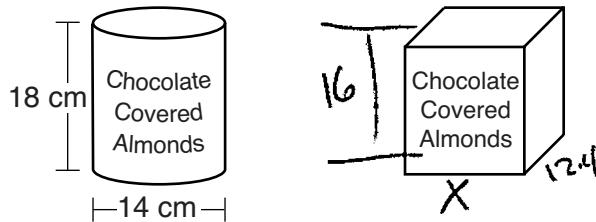

$$\frac{76,800 \text{ cm}^3}{2,704 \text{ cm}^3} \approx$$

28 containers

Score 2: The student made a rounding error in finding the side length of the new container. No further correct work was shown.

Question 34

34 A manufacturer is designing a new container for their chocolate-covered almonds. Their original container was a cylinder with a height of 18 cm and a diameter of 14 cm. The new container can be modeled by a rectangular prism with a square base and will contain the same amount of chocolate-covered almonds.

If the new container's height is 16 cm, determine and state, to the *nearest tenth of a centimeter*, the side length of the new container if both containers contain the same amount of almonds.

$$\frac{16}{18} = \frac{x}{14}$$
$$18x = 224$$
$$\frac{18}{18} x = \frac{224}{18}$$
$$x = 12.4 \text{ cm}$$

The side length of the container would be 12.4 cm.

A store owner who sells the chocolate-covered almonds displays them on a shelf whose dimensions are 80 cm long and 60 cm wide. The shelf can only hold one layer of new containers when each new container sits on its square base. Determine and state the maximum number of new containers the store owner can fit on the shelf.

$$60 \div 12.4 = 4.8$$
$$80 \div 12.4 = 6.5$$

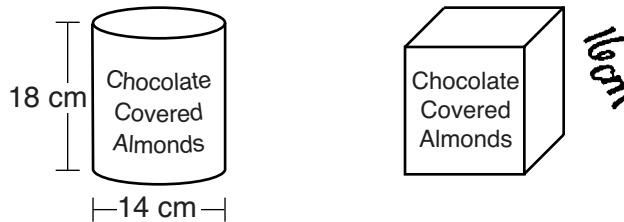

$$6(4) = 24$$

The shelf can hold 24 containers of chocolate covered almonds.

Score 1: The student had a completely incorrect response to find the side length of the new container. The student used the incorrect side length to find an appropriate number of new containers.
